

A Secret Shared

Expectations and realities of sharing passwords

Pilar Garcia

From the White Paper...

When Alice tells Bob a secret and later regrets doing so, she cannot make Bob forget that secret without resorting to brain surgery. We feel that brain surgery is beyond the scope of 1Password,¹⁴ and therefore users should be aware that once a secret has been shared the recipient cannot be forced to forget that secret.

¹⁴We have made no formal decision on whether rocket science is also beyond its scope.
